RAG-Diary: Business Analysis and System Analysis Document Set

> A complete BA/SA document set for an AI-assisted diary system from problem discovery and analysis through design and delivery, with full requirement traceability.

RAG-Diary is a diary app that retrieves memories by meaning. A user types what they want to recall; the system finds the entries that match, lets the user talk to their own notes, and produces a mood summary with an illustration.

> Thai version: ../README.md

All 25 documents are available in English, in the same order and with the same identifiers as the Thai edition.

Document information

Item	Detail
Document set	BA/SA document set: RAG-Diary
Version	1.0
Prepared	15 October 2026
Status	Reviewed, round 1 (25 October 2026)
Extent	25 documents (D-00 to D-24), a 22-slide deck and a 30-second clip

Intended readers

This set is written for hiring managers and interviewers for Junior Business Analyst and System Analyst roles who want to see how the work is thought through end to end, not only the code.

What makes this set different

- Requirements trace to test cases with 100 percent coverage.
- Quality requirements are written as measurable scenarios, following ISO/IEC 25010.
- Functional requirements carry a verification section, following ISO/IEC/IEEE 29148.

- Weak points are recorded honestly, together with the plan to address them in later releases.

Deliverables

Deliverable	Detail	Location
25 documents	Markdown is the source of truth, with a PDF for each	`docs/` and `output/pdf/`
22-slide presentation	Project overview for the portfolio, with speaker notes and Q&A	`output/presentation/`
30-second clip	Introduces the project with real screens and diagrams from the documents	`output/clip/`

About this set

The set records the RAG-Diary project from start to finish, covering both the business analyst and system analyst roles. It spans problem understanding, requirement elicitation, modelling, design, quality assurance and delivery across 25 documents.

Two things are deliberate. Every requirement can be traced to a test case, and every significant decision carries its rationale and the alternatives that were rejected.

A note on framing: this is a self-initiated project that I built myself, but the analysis is written from the perspective of a small team. Roles stand in for names so the reasoning and working method are visible without inventing a client.

Folder structure

Folder	Contents
00-case-study	The narrative document for the project
01-discovery	Problem understanding, stakeholders and the current state
02-requirements	Requirements, user stories, use cases, business rules and traceability
03-modeling	Process, architecture, data, sequence and privacy models
04-design	Screen design, the API contract and decision records
05-quality	Quality requirements, risks, the test plan and acceptance
06-delivery	Delivery plan, change log and glossary

Document index

Package

ID	Document	Link
D-00	README (this document)	-
D-01	Case Study	CASE-STUDY

Discovery

ID	Document	Link
D-02	Product Brief	PRODUCT-BRIEF
D-03	Stakeholder Matrix	STAKEHOLDER-MATRIX
D-04	As-Is / To-Be	AS-IS-TO-BE

Requirements

ID	Document	Link
D-05	SRS	SRS
D-06	User Stories	USER-STORIES
D-07	Use Cases	USE-CASES
D-08	Business Rules	BUSINESS-RULES
D-09	Traceability Matrix	TRACEABILITY-MATRIX

Modelling

ID	Document	Link
D-10	Process Flows	PROCESS-FLOWS
D-11	C4 Architecture	C4-ARCHITECTURE
D-12	Data Model	DATA-MODEL
D-13	Sequence Diagrams	SEQUENCE-DIAGRAMS
D-14	DFD and Privacy	DFD-PRIVACY

Design

ID	Document	Link
D-15	UI Wireframes	UI-WIREFRAMES
D-16	API Contract	API-CONTRACT
D-17	ADR	ADR

Quality

ID	Document	Link
D-18	NFR Specification	NFR-SPEC
D-19	Risk Register	RISK-REGISTER
D-20	Test Plan	TEST-PLAN
D-21	UAT	UAT

Delivery

ID	Document	Link
D-22	Roadmap	ROADMAP
D-23	Change Request Log	CHANGE-REQUEST-LOG
D-24	Glossary	GLOSSARY

Suggested reading order

Path	Best for	Order
Quick	Little time, wants the shape of the project	CASE-STUDY, then GLOSSARY
Full	Wants to see every step of the reasoning	PRODUCT-BRIEF, then folders 01 through 06

Notes

The central register of all documents, together with the agreed working process, is in DOCUMENT-PLAN (Thai).
