Document	Requirements Traceability Matrix
Version	1.0

2. Purpose and how to read it

This document answers one question: what did each requirement become in the system, and is there a test point that covers it?

Reading left to right is forward tracing: gap, then requirement, then screen, then API, then test case. Reading right to left is backward tracing: from any test point you can see which requirements it covers.

A dash means there is no direct link.

4. Coverage summary

Measure	Value
Total requirements	23
Requirements with a link in every relevant column	23
Coverage	100 percent
Requirements with no screen	0
Requirements with no test case	0

NFR-07 (maintainability) has no natural link to a use case, screen or API, because it is a property of the development process. It is checked by code review (TC-22).

5. Improvement points

The items below are not defects in the requirements. They are design gaps that should be closed in the next round.

ID	Topic	Proposal
FR-13	Closed: GET /export was added on the server and the settings page calls it	-
FR-14	Closed: DELETE /data deletes in one call and the settings page calls it	-
